***das ist ein geschätzter Kalender, der sich entsprechend unserer Bedürfnisse ändern könnte**

Day 5-7

Marketing Mix &

Marketing Plan

Step 4: The Marketing Mix (Day 5)

- Go to Part 2 (p. 6) of the business plan document, which contains the marketing mix
- It is important to assign initial responsibilities and roles and set deadlines

Ai & the Marketing Mix: What is possible?

In this phase, we use AI tools to make the strategic pillars of your project more efficient and data-driven. Here are the options for the 4 Ps:

Product:

- Conducting a comprehensive SWOT analysis by combining Perplexity (for current market research) and Claude (for strategic development).

Price:

- Identifying pricing strategies and market comparisons using LLMs such as Gemini, ChatGPT, or Claude to find the optimal positioning for your offering.

Ai & the Marketing Mix: What is possible?

Place (Distribution):

- Developing a dedicated AI channel strategy to determine where and how best to reach your target audience.

Promotion (Communication):

- Automated workflows
- Prompt engineering

These Ki Tools will save you several hours a week

- Claude (Anthropic): The specialist in logic and precision. He's unbeatable at coding and analyzing long documents, and he can execute tasks directly within software (Computer Use).
- ChatGPT (OpenAI): The creative all-rounder. It's perfect for brainstorming, natural writing, and interactive editing of text and code in the "Canvas" view.
- Gemini (Google): The productivity pro. It's integrated directly into Gmail and Google Drive and can analyze massive amounts of data or hours of video in seconds.

These Ki Tools will save you several hours a week

Perplexity: The intelligent search engine. It provides fact-based answers in real time with direct source citations and is ideal for market analysis and research.

That's really all you need to get started.

Product:

SWOT with Perplexity + Claude

- Send a research request to Perplexity (e.g., “Analyze current market trends for [your business idea]”)
- Perplexity provides real-time data, sources, and competitive analyses
- Transfer the data to Claude to strategically evaluate the raw data
- Claude creates the SWOT matrix (Strengths, Weaknesses, Opportunities, Threats) and provides recommendations for action

While standard AI models often rely on information that is several months old, Perplexity accesses the internet in real time.

Claude uses this real-time data not only to list superficial points but to provide an in-depth analysis of your market position

Product: SWOT with Perplexity + Claude

By analyzing real competitor data, your SWOT analysis will be more realistic and convincing for the final presentation.

To better understand Perplexity, you can read [this article](#).

Price: Gemini, ChatGPT & Claude

- Enter your product's key data (costs, target audience, USP)
- AI analyzes competitors' pricing models (e.g., subscription vs. one-time purchase)
- Simulate pricing scenarios to determine the optimal profit margin
- Create a price list including discount tiers or bundle ideas

Example prompt: "I plan to offer [product/service] to [target audience] in [region]. My variable costs are [amount]. Analyze the current price points of my top 3 competitors and suggest three different pricing models (Economy, Standard, Premium) that ensure a profit margin of at least 30%."

Place:

Ai Channel Strategy (Gemini, ChatGPT or Claude)

- Defining the customer journey (Where does the target audience look for solutions?)
- AI-powered selection of channels (Shopify, Amazon, social commerce, affiliate)
- Setting up the technical infrastructure for the selected platforms
- Localization check: AI assesses the cultural suitability of sales channels for different markets

Example prompt: “Based on my product [product name] and my target audience [target audience], create a list of the 5 most effective digital sales channels. Rate each channel based on ‘effort to set up’ and ‘potential reach,’ and give me a recommendation on which channel we should use for the MVP (Minimum Viable Product)”
